

ECON 630 (CRN 80336)

Econometrics III:

Prediction, Time Series, and Causal Inference

Fall 2026 · 3 Credits · Tue/Thu 9:00–10:15 am · 244 Saunders Hall

Peter Fuleky

2026-09-01

1 Course links

Everything for this course lives in one place. Start here and you will not need to hunt for anything.

Course repository	uh-manoa-uhero/econ630 — the hub
Prediction & time series notes	ISLR Ch 1–13 , Verbeek 14–15
Causal inference notes	The Effect
The weekly write-up	what to submit , deadlines , how
Presentation sign-ups	schedule and slots
Exam question pool	propose and upvote exam questions
Announcements	schedule changes , exam logistics
Q&A	ask about the material
Your homework repository	econ630-f26-hw-<your-username> — I create it and invite you

The two notes sites and the course repository are private to this class, so **sign in to GitHub first**; see the note under *Materials*. This syllabus is the only public page.

Office	508 Saunders Hall
Office hours	By appointment — in person or via Zoom

3 Course description

This course gives economists a working command of the two dominant empirical traditions in modern economics: **prediction** (statistical / machine learning and time-series forecasting) and **causal inference** (research design for estimating treatment effects from observational data).

The first two-thirds of the course build a supervised- and unsupervised-learning toolkit and a time-series forecasting toolkit, following *An Introduction to Statistical Learning* (ISLR) and two time-series chapters from Verbeek. The final third pivots from “what will happen?” to “what *causes* what?”, following Nick Huntington-Klein’s *The Effect*.

4 Learning outcomes

By the end of the course students will be able to:

1. Fit, tune, and honestly evaluate supervised-learning models (regression and classification) using resampling, regularization, and flexible methods.
2. Apply tree-based methods, support vector machines, deep learning, and unsupervised methods, and choose appropriately among them.
3. Model and forecast economic time series (ARMA, unit roots) and multivariate systems (VAR, cointegration, VECM).
4. Translate an economic question into a research design, express identifying assumptions with causal diagrams (DAGs), and reason about back-door paths.
5. Estimate causal effects with regression, matching, fixed effects, event studies, difference-in-differences, instrumental variables, and regression discontinuity — and state when each is credible.
6. Carry out all of the above in **R** with the **tidymodels** / **tidyverse** ecosystem and the standard econometrics packages.
7. Prepare and deliver a lecture of at least 30 minutes on a technical topic and guide the class discussion that follows — building teaching and presentation skills through the course’s flipped-classroom format.

5 Format and pacing

In-person, meeting **Tuesdays and Thursdays, 9:00–10:15 am**, in the classroom. Instruction runs **08/25 through 12/10**, with the final exam during the **12/14–12/18** examination period. This is a **flipped classroom**: you prepare before each session — reading, watching the video lecture, and reviewing the lecture notes for that day’s topic — and one enrolled student leads the session by delivering a lecture of **at least 30 minutes** on the topic, analyzing labs/exercises and initiating class discussion. The instructor’s role is to guide that discussion, not to carry a lecture. There are more class sessions over the semester than students enrolled, so everyone will sign up to lead multiple sessions; sign-ups will be arranged early in the term. Each week’s assigned topic spans both weekly sessions — one to present the material and open discussion, the other to continue discussion, work through labs/exercises, and answer questions.

Beyond covering the technical material, repeatedly preparing and leading a session is meant to build your teaching and presentation skills — explaining technical content clearly, anticipating questions, and facilitating a discussion — skills that transfer directly to seminars, job talks, and teaching of your own.

6 Prerequisites

An introductory econometrics course (OLS, hypothesis testing) and basic statistics. No prior R is assumed — the ISLR labs in Weeks 1–3 ramp up R skills gently alongside a gentle statistics review, so the course is self-onboarding. Comfort with algebra and basic calculus notation is expected.

7 Materials

7.1 Primary text — the source textbooks

Read the assigned chapter in the original text first. ISLR and *The Effect* are free online; for the two time-series chapters, where the source (Verbeek) is not freely available, the lecture notes serve as the primary reading instead.

- James, Witten, Hastie & Tibshirani, *An Introduction to Statistical Learning* (2nd ed.), Ch 1–13 — free PDF and resources at statlearning.com.
- Huntington-Klein, *The Effect: An Introduction to Research Design and Causality* — full text free online at theeffectbook.net.
- Verbeek, *A Guide to Modern Econometrics* (5th ed.), Ch 8–9 — the source for the time-series chapters. Not freely available; the lecture notes cover this material in full, and the companion data for labs will be provided. Additional online resources include [Forecasting: Principles and Practice](#), and [STAT 510: Applied Time Series Analysis](#).

7.2 Review — the instructor’s lecture notes

After the original chapter and the videos, use these lecture notes to consolidate your understanding. They are self-contained, include all lab code, worked exercises, and a *Further Reading* section of landmark applied papers per chapter. Each set of notes is a searchable website, with the full text also downloadable as a PDF or EPUB from the site’s *Downloads* section.

- [Prediction & time series notes](#) — *Lecture Notes for ISLR and Time Series*, covering ISLR Ch 1–13 and Verbeek time series Ch 14–15.
- [Causal inference notes](#) — *Lecture Notes for The Effect*, covering research design and causal methods.

! You need a GitHub account to read the notes

Both notes sites are private to this class. Sign in to [GitHub](#) with the account you give me at the start of the semester, and I will grant you access; the sites then open normally. If you are not signed in, or your account has not been added yet, you will be redirected to a GitHub

login page instead of the notes. Create a free account before the first session and send me your username — no institutional email is required. You will need the same account to post in Discussions (see *Communications*) and to submit homework (see *Assessment*).

7.3 Companion video lectures (free)

Module	Video source	Link
ISLR (Ch 1–13)	Stanford <i>Statistical Learning</i> — Hastie, Tibshirani & Witten	statlearning.com · YouTube
Time series (Verbeek Ch 14–15)	Ben Lambert — <i>Time Series</i> (ARMA, unit roots, VAR, cointegration); <i>Forecasting: Principles and Practice</i> (ARIMA, decomposition, exponential smoothing)	Lambert · FPP
Causal inference (<i>The Effect</i>)	Nick Huntington-Klein — <i>The Effect: Videos on Causal Inference</i> (episode-mapped to chapters)	nickchk.com/videos

The two author video series (ISLR, *The Effect*) track our chapters almost one-to-one. The time-series chapters are the only place we rely on third-party video (Lambert and *Forecasting: Principles and Practice*).

7.4 Software (free)

[R](#) + [Positron](#), with `tidymodels`, `tidyverse`, `ISLR2`, and the engine packages used in the labs (`glmnet`, `xgboost`, `randomForest`, `kernlab`, `rpart`, `keras3`), plus the time-series packages (`forecast`, `tseries`, `vars`, `urca`) and the causal packages (`fixest`, `did`, `rdrobust`, `AER`, `MatchIt`). The notes ship an `renv` lockfile; `renv::restore()` installs everything at pinned versions.

8 How each week works

Every week follows the same rhythm, whether or not you are leading that week’s session:

1. **Read** the assigned chapter in the original textbook - ~2-3 hrs.
2. **Watch** the assigned video lecture(s) - ~2 hrs.
3. **Review** your understanding by reading the corresponding lecture notes - ~1-2 hrs.
4. **Run** the lab code yourself (the `.R` scripts mirror every code chunk; edit and re-run them) - ~2 hrs.
5. **Self-check** the coding and applied exercises against the provided solutions - ~2 hrs.
6. **Write up, by hand**, a short summary of the week’s material and your solutions to the conceptual exercises, and submit it by **Sunday 8 pm** — ~2 hrs.
7. **Present or discuss in class**. If you are leading a session this week, turn steps 1–6 into a lecture of at least 30 minutes. Either way, come to both the Tuesday and Thursday sessions ready to discuss the material.

Steps 1–6 happen before the week’s first session. The Sunday 8 pm deadline is the Sunday *preceding* that week’s Tuesday — so you arrive having already read, watched, run the code, and written up your understanding. That is what makes the flipped format work: class time is for discussion, not first exposure.

Week 1 is the exception. Its material is introduced in class, so there is no submission for it; the first deadline is **Sun 08/30**, covering Week 2. That gives **15 graded submissions** over the semester.

The hand-written submission (step 6) is collected; the labs and coding exercises in steps 4–5 are self-check practice, but are also analyzed and discussed in the classroom sessions.

9 Schedule

Three blocks, each ending in an exam. Each week’s topic is covered across both of that week’s sessions — the Tuesday session is a student-led lecture on the assigned chapter plus opening discussion, and the Thursday session continues discussion, works through labs/exercises, and answers questions. The sign-up for who presents which week is arranged separately (see *Format and pacing*); the tables below show the fixed topics and readings, independent of who presents them.

- **Block I** → Midterm 1
- **Block II** → Midterm 2
- **Block III** → Final (causal material only)

No class on Tue 11/03 (Election Day) or Thu 11/26 (Thanksgiving) — both are University non-instructional days. That leaves 30 meetings between the first session on 08/25 and the last on 12/10, so three weeks run as a single session: Week 6, shortened to make room for Midterm 1; Week 11, shortened by Election Day; and Week 14, shortened by Thanksgiving. Multivariate time series (Verbeek 15) now spans two weeks (11–12) instead of being compressed into one, so the session right before Midterm 2 is genuine review, not first contact with the densest material in the block.

9.1 Block I — Supervised learning → Midterm 1

Table 4: **Midterm 1** — **Thu 10/01**, in class. Covers ISLR Ch 1–7.

Week	Dates	Notes	Topic	Video
1	Tue 08/25 · Thu 08/27	ISLR 1 + 2	Course intro; statistical learning, bias–variance, KNN; R onboarding starts	StatLearning Ch 1–2
2	Tue 09/01 · Thu 09/03	ISLR 3	Linear regression (revisited in Block III)	StatLearning Ch 3

Week	Dates	Notes	Topic	Video
3	Tue 09/08 · Thu 09/10	ISLR 4	Classification: logistic, LDA/QDA, naive Bayes	StatLearning Ch 4
4	Tue 09/15 · Thu 09/17	ISLR 5	Resampling: cross-validation & the bootstrap (simulation revisited in Block III)	StatLearning Ch 5
5	Tue 09/22 · Thu 09/24	ISLR 6	Model selection & regularization: subset selection, ridge, lasso	StatLearning Ch 6
6	Tue 09/29 (<i>one session</i>)	ISLR 7	Moving beyond linearity: polynomials, splines, GAMs	StatLearning Ch 7

9.2 Block II — Advanced ML & time series → Midterm 2

Table 5: **Midterm 2** — **Thu 11/12**, in class. Covers ISLR Ch 8–12 + Time Series Ch 14–15.

Week	Dates	Notes	Topic	Video
7	Tue 10/06 · Thu 10/08	ISLR 8	Tree-based methods: trees, random forests, boosting, BART	StatLearning Ch 8
8	Tue 10/13 · Thu 10/15	ISLR 9 + 12	Support vector machines; unsupervised learning (PCA, k -means, hierarchical)	StatLearning Ch 9, 12
9	Tue 10/20 · Thu 10/22	ISLR 10	Deep learning: feed-forward nets, CNNs, RNNs	StatLearning Ch 10
10	Tue 10/27 · Thu 10/29	Verbeek 14	Univariate time series: ARMA, unit roots, forecasting	Lambert, FPP (ARIMA & forecasting)

Week	Dates	Notes	Topic	Video
11	Thu 11/05 (<i>one session — no class Tue 11/03, Election Day</i>)	Verbeek 15	Multivariate time series: VAR, Granger causality, IRFs, cointegration, VECM	Lambert (VAR & cointegration)
12	Tue 11/10 (<i>one session</i>)	Verbeek 15 (continued)	Multivariate time series, continued	Lambert (VAR & cointegration)

Optional self-study (not on any exam): ISLR 11 (Survival Analysis) and ISLR 13 (Multiple Testing) remain in the notes for interested students.

9.3 Block III — Causal inference → Final

Table 6: **Final Exam** — during the **12/14–12/18** examination period; the exact slot comes from the Registrar’s final examination schedule and will be posted in *Announcements*. Covers the causal material from *The Effect* only.

Week	Dates	Notes	Topic	Video (<i>The Effect</i>)
13	Tue 11/17 · Thu 11/19	Effect 5–8 + 10	Identification; causal diagrams (DAGs); drawing diagrams; closing back doors; treatment effects (ATE/ATT/LATE)	Identification → Treatment Effects
14	Tue 11/24 (<i>one session — no class Thu 11/26, Thanksgiving</i>)	Effect 13 + 14	Regression <i>as causal adjustment</i> (re-frames ISLR 3); matching	Regression, Matching
15	Tue 12/01 · Thu 12/03	Effect 16 + 17 + 18	Fixed effects; event studies; difference-in-differences	Fixed Effects, Event Studies, DiD
16	Tue 12/08 · Thu 12/10	Effect 19 + 20	Instrumental variables; regression discontinuity	IV, RDD

How the prediction and causal parts connect. Week 13 front-loads the conceptual design material — identification, causal diagrams, back-door paths, and the definitions of treatment effects — so that Weeks 13–15 are pure method. Effect Ch 13 (regression) is taught as a *causal re-interpretation* of the OLS machinery from ISLR Ch 3, not from scratch.

10 Assessment

Component	When	Coverage	Weight
Weekly homework	Sundays, 8 pm	Hand-written; Weeks 2–16 (15 submissions)	10%
Presentation & participation	Throughout	Leading assigned sessions; discussion engagement	30%
Midterm 1	Thu 10/01 , in class	ISLR Ch 1–7	20%
Midterm 2	Thu 11/12 , in class	ISLR Ch 8–12 + Time Series Ch 14–15	20%
Final Exam	12/14–12/18 , slot TBA	Causal inference (<i>The Effect</i>) only	20%

Homework (10%). A hand-written summary of the week’s study material and your solutions to the conceptual exercises, due by **8 pm on the Sunday before that week’s sessions** — see *How each week works*. Weeks 2–16, so 15 submissions; Week 1’s material is introduced in class and has no write-up.

The assignment is the same every week; there is no separate hand-out. The *Schedule* above says which chapter each week covers, and you write up the conceptual exercises from it. Write the work out by hand, then scan it (or photograph it) and submit it as a single PDF. Writing by hand aids retention and confirms steady weekly engagement. The coding and applied exercises are self-checked against the provided solutions and are not collected.

You submit to **your own private GitHub repository**, `econ630-f26-hw-<username>`. I create it and send you an invitation before the first deadline; accept it once and you are set for the semester. Upload the PDF through the GitHub website — **Add file** → **Upload files** — naming it `weekNN.pdf`. You never need Git or a terminal.

Your classmates cannot see it. Besides you and me, the administrators of the `uh-manoa-uhero` organization can read it. Organization administrators have access to every repository the organization owns.

GitHub records the moment of every upload, and that record is what I grade against. Full instructions live in `assignments/README.md` in the course repository.

Presentation & participation (30%). Each student [signs up](#) to lead multiple class sessions over the semester — there are more class sessions than students enrolled, so everyone leads more than one. When leading a session, prepare and deliver a lecture of **at least 30 minutes** on that day’s topic (using the reading, videos, and lecture notes as source material), then guide the discussion that follows; the instructor’s role is to facilitate, not to lecture. Within a week of leading, you also post **five proposed exam questions** in your session’s thread in the **Exam questions** discussion category — one question per comment, each with a short answer key. Grading considers preparation, clarity of the lecture, the quality of the discussion you draw out of your classmates, and the questions you contribute. The remainder of the grade reflects active participation in every other session — asking questions and engaging with the presenter’s material.

Exams (20% each). Each exam is **closed-book, closed-notes, and timed**, held in the classroom and proctored by the instructor. Exams combine conceptual short-answer items with applied “interpret-this-output” questions.

Where the questions come from. Part of each exam is drawn from the class question pool: after leading a session you post five candidate questions in the **Exam questions** discussion category, and everyone upvotes the questions they want to see. Upvoting stays open until the exam is distributed. I read the whole pool for the block before writing the exam, and upvotes tell me what the class considers fair and central — but the exam is composed of the questions **I** choose, some from the pool, some reworked, some my own. A well-upvoted question is not a guarantee, and the pool never narrows the coverage listed above.

The two midterms are given during a regular class session — **Thu 10/01** and **Thu 11/12** — so they take the usual 75 minutes. The **Final** is scheduled in the University’s examination period, **12/14–12/18**; the exact day and time come from the Registrar’s final examination schedule and will be posted in *Announcements* once published. Do not book travel for that week until it is.

11 Course policies

11.1 Late work

The weekly hand-written submission is due **Sunday 8 pm**. Late work may be accepted at my discretion — but the deadline is what makes the weekly homework a reliable signal of steady engagement (see *How each week works*), so treat it as real rather than as a suggestion. Every upload is timestamped. Submit an incomplete write-up rather than nothing.

11.2 Withdrawal

Add/drop and withdrawal deadlines follow the University’s academic calendar — see the [UH Mānoa Academic Calendar](#) for the current semester’s specific dates for dropping without a “W” and for withdrawing from the course.

11.3 Extra credit

None.

11.4 Communications

Course announcements and Q&A go through **GitHub Discussions** in the course repository (linked under *Course links*), using four categories:

- **Announcements** — schedule changes, exam logistics, and corrections to the lecture notes. Instructor-posted. **Watch the repository** — *Watch* → *Custom* → *Discussions* — so these reach you by email. I also @mention the class team on anything important, which notifies you whether or not you set watching up, but do not rely on that alone.

- **Q&A** — questions about chapters, labs, and exercises. Post here rather than emailing, so the whole class benefits from the answer. Answering a classmate counts toward your participation grade.
- **Presentation sign-ups** — one pinned thread where you claim the sessions you will lead. The resulting schedule is kept in `presentations.md` in the repository.
- **Exam questions** — one thread per class session, where the student who led that session posts five questions for the exam pool and the rest of the class upvotes the ones they want to see. See *Exams* under *Assessment*.

Everything in Discussions is visible to the whole class, so do not post graded work there — homework is submitted privately (see *Assessment*).

For anything personal — grades, accommodations, access problems — email fuleky@hawaii.edu; expect a response within 24 hours. Office hours are held by appointment, in person or via Zoom.

12 AI and outside resources policy

Generative AI (e.g., ChatGPT, Copilot) may be used throughout the course — including on the weekly homework, the lab/coding exercises, and preparing your presentation — as a **learning tool**: to help you understand material, debug code, or check your reasoning. Keep in mind that AI is not failproof and generated content requires verification. **AI use is not permitted during exams.** All exams are closed-book, closed-notes, and taken under supervision (see *Assessment*). Submitted homework and in-class lectures must still reflect your own understanding: if you cannot explain or reproduce a solution — or field your classmates' questions about it — you have not actually learned the material the exams will test you on.

13 Course technology

Course materials (lecture notes, labs, assignments, schedule) are distributed through the course repository `uh-manoa-uhero/econ630` and the two lecture-note websites linked under *Materials*. The following tools are used:

- **GitHub** hosts the course repository, the lecture notes, announcements and Q&A (Discussions), and homework submission. A free account is required; no institutional email is needed ([Accessibility](#), [Privacy Statement](#)).
- **Zoom** is used for office hours held remotely ([Accessibility Statement](#), [Privacy Policy](#)).

The hand-written weekly homework is scanned or photographed and uploaded as a single PDF to your private homework repository; see *Assessment* for the procedure.

13.1 Required hardware and software

- A laptop able to run [R](#) and [Positron](#) (see *Materials* for the full package list), brought to class for lab walkthroughs and discussion.
- A scanner or smartphone camera and a PDF viewer, for submitting hand-written homework.

13.2 Minimum technical skill requirements

Comfort with basic computer skills — installing software, using a web browser, and downloading/uploading/scanning files — is assumed. No prior programming experience is required; see *Prerequisites*. **No knowledge of Git or version control is required either** — GitHub is used here only as a website: you click links, read pages, post in Discussions, and upload a PDF through a web form.

14 Technical support

- [UH ITS Computer Help Desk](#) — email help@hawaii.edu or call (808) 956-8883 (toll-free 1-800-558-2669 from the neighbor islands)
- [Information Security for Students](#)
- [GitHub Docs](#) for the course repository and the lecture-note sites; for anything specific to this course, email fuleky@hawaii.edu or ask in *Q&A*

This course does not use Lamakū or Laulima. Materials, announcements, and homework all go through GitHub — see *Course technology*.

15 Academic support

University of Hawai i Online Learning Academy (all students). The [Online Learning Academy](#) (OLA) provides free, one-on-one tutoring — basic math, pre-algebra, algebra, geometry, trigonometry, calculus, biology, chemistry, physics, environmental science, writing, and language arts — by highly qualified college tutors, for UH System students statewide.

UH Mānoa.

- [Hamilton Library](#)
- [Writing Center](#)
- [Learning Assistance Center](#)

16 University policies and procedures

The University of Hawai i is an equal opportunity/affirmative action institution. It is committed to a policy of nondiscrimination on the basis of race, sex, victims of domestic or sexual violence, gender identity and expression, age, religion, color, national origin, ancestry, citizenship, disability, genetic information, marital status, breastfeeding, income assignment for child support, arrest and court record (except as permissible under State law), sexual orientation, national guard absence, or status as a covered veteran. For additional details, visit the [UH Systemwide Policies and Procedures Information System \(PPIS\)](#) site.

16.1 Student conduct

Review the [UH Systemwide Student Conduct Code](#) for more information. Review the [Online Netiquette and Privacy Tips](#) to prepare yourself when interacting online.

16.2 Academic honesty

Acts of dishonesty, including but not limited to the following:

- Cheating, plagiarism, or other forms of academic dishonesty.

Cheating is an act of academic dishonesty and includes, but is not limited to:

1. use of any unauthorized assistance in taking quizzes, tests, or examinations;
2. use of sources beyond those authorized by the instructor in writing papers, preparing reports, solving problems, or carrying out other assignments;
3. the acquisition, without permission, of tests or other academic material belonging to a member of the UH faculty, staff or student body; and
4. engaging in any behavior specifically prohibited by a faculty member in the course syllabus or class discussion.

Plagiarism is also an act of academic dishonesty and includes, but is not limited to:

- the use, by paraphrase or direct quotation, of the published or unpublished work of another person without full and clear acknowledgement.
- It also includes the unacknowledged use of materials prepared by another person or agency engaged in the selling of term papers or other academic materials.

Furnishing false information to any UH official, faculty member, or office.

Forgery, alteration, or misuse of any UH document, record, or form of identification.

16.3 UH Title IX

The University of Hawai i is committed to providing a learning, working and living environment that promotes personal integrity, civility, and mutual respect and is free of all forms of sex discrimination and gender-based violence, including sexual assault, sexual harassment, gender-based harassment, domestic violence, dating violence, and stalking ([UH Title IX](#)). If you or someone you know is experiencing any of these, the University has staff and resources on your campus to support and assist you.

- If you would like to report incidents of sex discrimination or gender based violence, contact your campus [Title IX Coordinator](#) or submit the [online reporting form](#).
- If you wish to remain ANONYMOUS, speak with someone CONFIDENTIALLY, or would like to receive information and support in a CONFIDENTIAL setting, contact your campus' [confidential resource](#).

16.4 Accommodation statement

The University of Hawai i is committed to a barrier-free campus and provides accommodations to ensure students with disabilities equal access to education. We agree to make academic adjustments to ensure non-discrimination of students with disabilities. This commitment is in accordance with applicable state and federal laws, including the Americans with Disabilities Act, and Sections 504 and 508 of the Rehabilitation Act. Under the Americans with Disabilities Act (Title II) and the Rehabilitation Act of 1973 — Sections 504 and 508 — individuals with disabilities have protections against discrimination and are assured access to programs, services and activities. For more information see the [Americans with Disabilities Act and Rehabilitation Act of 1973 resources](#).

Students must self-identify to the appropriate Disability Services Office and complete the intake process before receiving reasonable accommodations. To ensure the prompt and effective provision of accommodations, students should contact the Disability Services Office as early as possible. The disability services office at **UH Mānoa is the KOKUA office**.

Visit the [KOKUA website](#). KOKUA can be reached at (808) 956-7511 or (808) 956-7612, email: kokua@hawaii.edu.

16.5 Student support

- [Academic Advising](#)
- [Bookstore](#)
- [Career Services](#)
- [Counseling Services](#)
- [Registration](#)

16.6 Financial aid statement

If students do not begin attendance in a course or stop participating in a course, Title IV funds must be returned according to Federal Return of Title IV funds regulations (34 CFR 668.21(a)). This means you may be required to return some (or all) of the financial aid you have received. It is very important to remember that colleges are required to take steps necessary to ensure that students are academically engaged in order to justify the disbursement of Federal Title IV student aid funds. If at any time your plans change and you no longer plan to participate in the courses in which you enrolled, you must contact the financial aid office to minimize any possible negative financial impact.

For more information on financial assistance for your education, please contact your [home campus financial aid office](#). Financial assistance may include grants, scholarships, and other resources to help you pay for the cost of college. A financial aid adviser will be able to help you navigate this process to determine your eligibility for these funds.

16.7 Basic needs statement

Basic needs include food and housing, childcare, mental health, financial resources and transportation, among others. Student basic needs security is critical for ensuring strong academic performance, persistence and graduation and overall student well-being. If you or someone you know are experiencing basic needs insecurity, please see the [UH Mānoa Resources site](#).
